DETAILED ACTION

Drawings

1. This application has been filed with informal drawings which are acceptable for examination purposes only. Formal drawings will be required when the application is allowed.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 25 and 26 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. The specification does not describe having a rectifier bridge with three controllable transistors and an additional transistor. For the purpose of examination, the Examiner assumes an arrangement as disclosed in fig. 4.

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

5. Claims 2, 11-14, and 23-24 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. With respect to claims 1 and 14, it is

Art Unit: 2834

not clear from the claims what the transistor can be. For the purposes of examination it will be assumed that the transistor could be a MOS field-effect transistor or a insulated gate bipolar transistor and a further semiconductor switching device. With respect to claims 11-12 and 23-24, it is not clear from the claims what constitutes the controlled transistor bridge.

Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

7. Claims 1-6, 9-10, 11-18, 21-24, and 25-26 are rejected under 35 U.S.C. 102(b) as being anticipated by Hamelin et al.

Hamelin et al discloses a device and method for controlling a generator comprising a diode bridge and transistor T in fig. 11. The reference also teaches that the signal to the transistor can be varied in lines 25-40 of column 7. The reference also discloses a diode D7. The reference also discloses an arrangement where three controllable transistors are used in fig. 13.

Claim Rejections - 35 USC § 103

8. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 2834

9. Claims 7-8, 19-20, 25, and 26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hamelin et al.

Hamelin et al discloses a device and method for controlling a generator comprising a diode bridge and transistor **T** in fig. 11. The reference also teaches that the signal to the transistor can be varied in lines 25-40 of column 7. The reference also discloses a diode **D7**. The reference does not disclose a capacitor or a step-up converter.

The Examiner takes official notice that capacitors and step-up converters would have been well known in the art for the purpose of conditions the power so that it can be used by the load. It would have been obvious to one of ordinary skill in the art to use a capacitor and step-converter for the purpose of conditioning the power so that it can be used by the load.

Conclusion

10. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Balogh also discloses a device for controlling a generator.
